Jun Li
Beijing, China

Advisor: Jack Calcut

Name: Jun Li From: Beijing, China Advisor: Jack Calcut Biography: My childhood inspiration in math comes from the book The Nine Chapters on the Mathematical Art. It introduced me to many interesting ways in which elementary math could be used in ancient times. Since then I've always been interested in math both in its pure form and its applications. That's why I decided to become a Mathematics and Computer Science major. My honors project is on Geometry/Topology, and I'm currently studying the classification of 3-manifolds, including their group presentations and decompositions. Through my time at Oberlin I have worked as a QS center tutor, a Chinese TA and a lab helper. Outside of math I also love drawing, traveling and taking secondary lessons on various instruments.
